Distributed fiber optic temperature sensing - DTS

Distributed temperature sensing principle

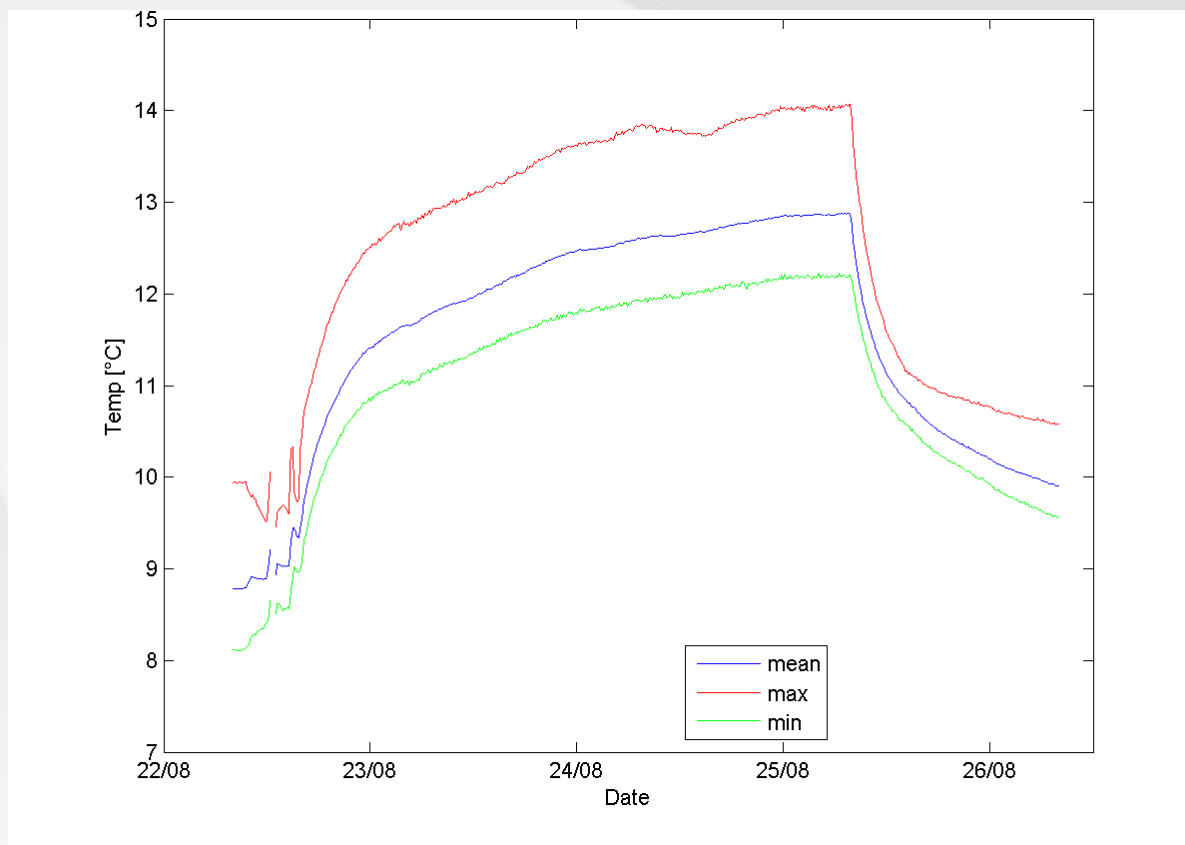

Install fiber in the borehole

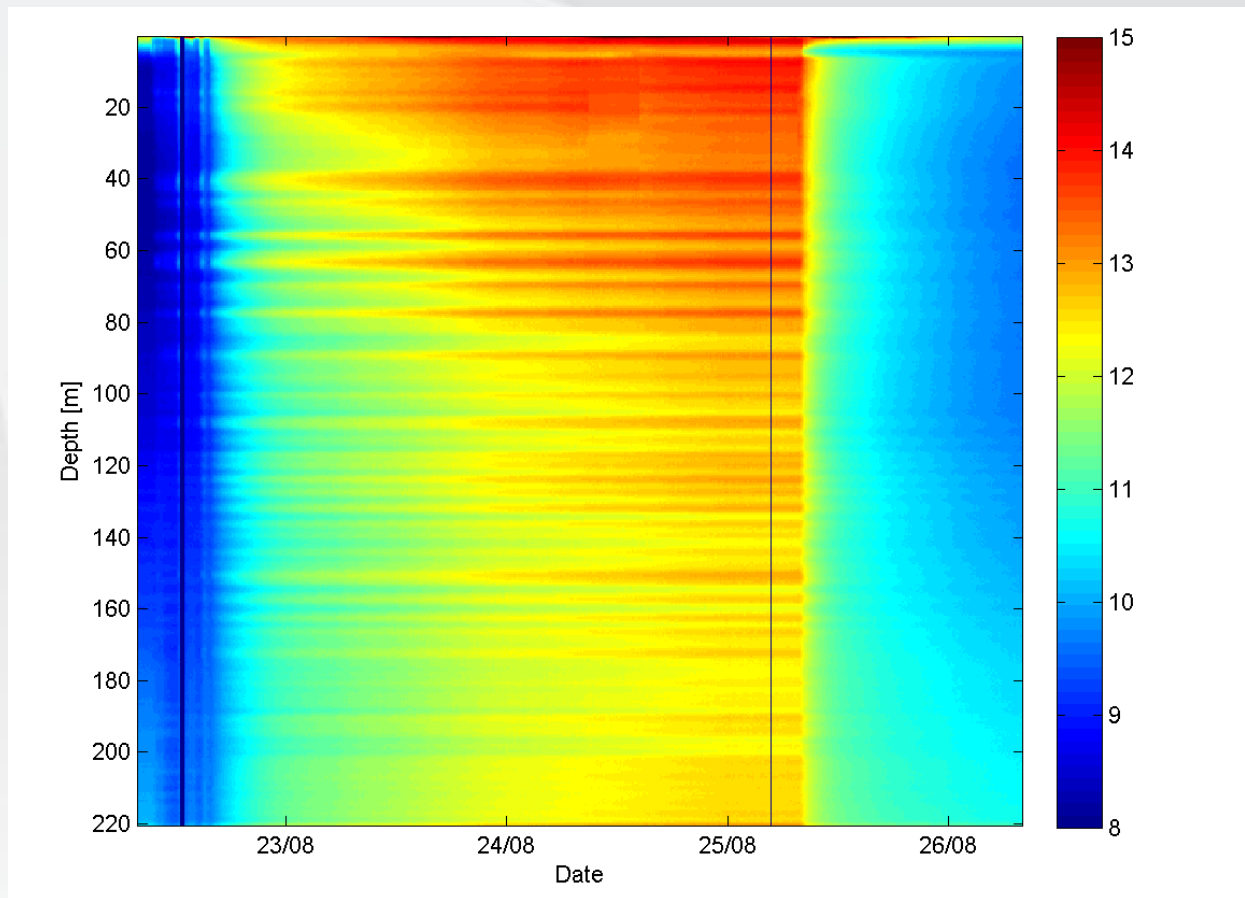

Fiber optic measurements

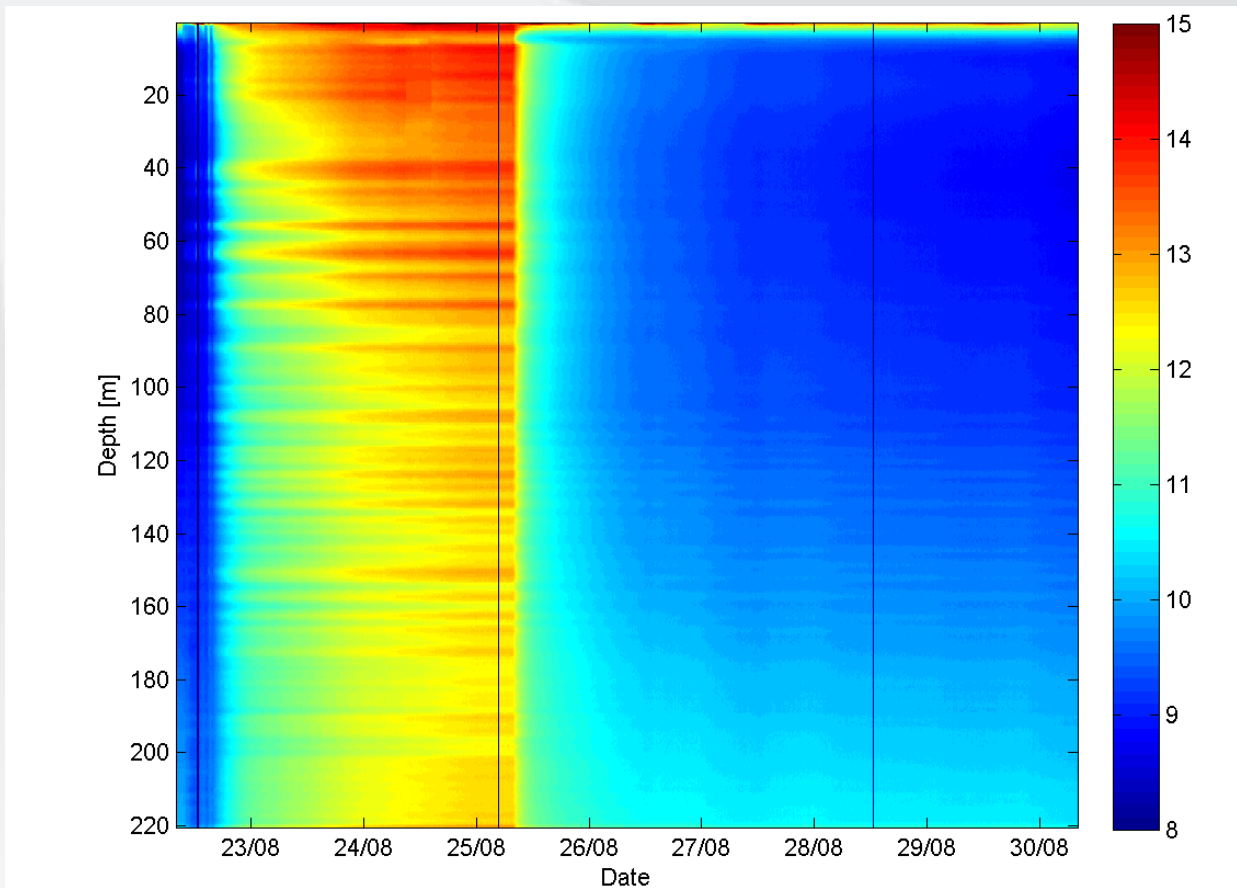

Temperature in the borehole during the TRT test measured by fiber optic temperature sensing

Temperature in the borehole during the TRT test measured by fiber optic temperature sensing

Temperature in the borehole after the TRT test measured by fiber optic temperature sensing

- Fiber optic monitoring is a important tool for understanding of the heat transfer mechanisms in the borehole
 - Effect of groundwater flow
 - Effect of thermal conductivities of rocks
